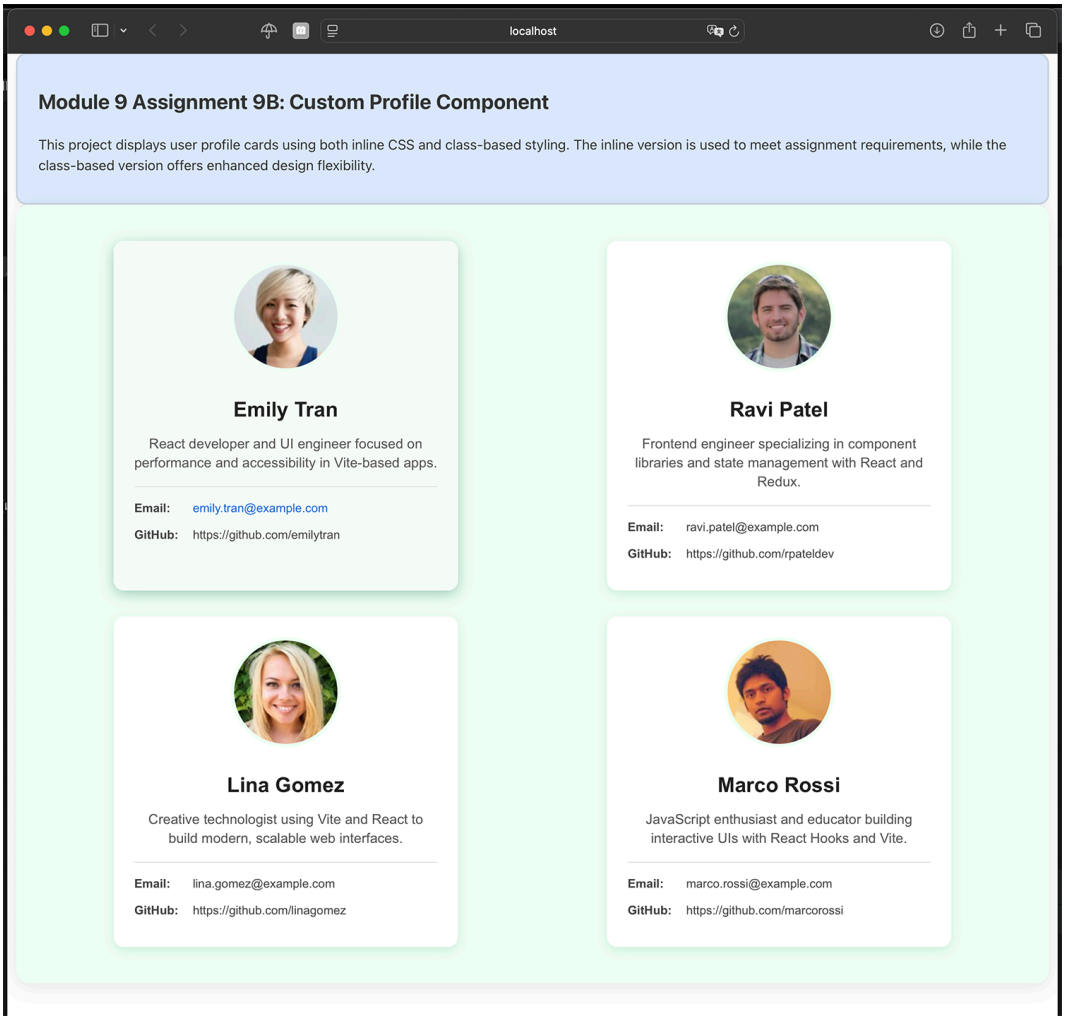
CS81 – Module 9 Assignment 9B: Custom Profile Component

This project was developed as part of Module 9 Assignment 9B for Santa Monica College's CS81 JavaScript Programming course. It demonstrates how to build modular and reusable React components using inline CSS, JSX, and props.

Project Features

- - UserProfileInline component styled entirely with inline CSS, as required by the assignment.
- - ContactCard subcomponent that displays email and GitHub contact information, also using inline styles.
- - Hover effects added to profile cards and links for visual interactivity.
- - A sample data set of frontend-related users stored in frontendProfiles.js.
- - Optional UserProfile component using external class-based styling for scalability beyond the assignment.

Submission Instructions


- - A ZIP archive named module9b-profile.zip containing all source files of your completed React assignment (including .jsx, .js, .css, and configuration files).
- - A link to your GitHub repository: https://github.com/sergehall/module9b-profile
- - A screenshot of your rendered UserProfile components (showing layout, styling, and ContactCard).
