

Module 4 Assignment 4A: Database Setup

Course: CS 85 - PHP Programming

Instructor: Vicky Seno

For this assignment, I set up and verified a local database development environment using Laravel Herd, Docker MySQL, and Adminer. PHP is running through Laravel Herd, and MySQL is running in Docker.

I confirmed that the database is accessible from the application using these connection settings:

Host: 127.0.0.1

Port: 3307

Username: cs85

Database: cs85_php_programming

Adminer URL: <http://127.0.0.1:8081>

I successfully connected to MySQL from the assignment page. The setup report showed:

Connection check: Connected to MySQL successfully.

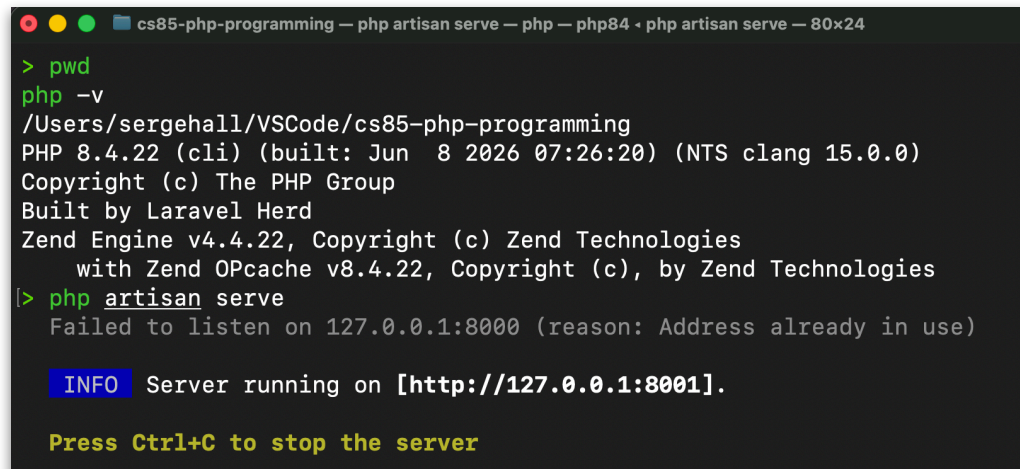

MySQL server version: 9.7.1

This confirms that PHP can communicate with the local MySQL server and that the database environment is ready for future SQL and database assignments.
