Module 3 Assignment 3A:

Review and Comment on Form

Course: CS 85 - PHP Programming
Instructor: Vicky Seno

For this assignment, I reviewed and recreated a PHP "Contact Me" form script. The goal was to understand how a basic PHP form handles user input, validates fields, keeps form values after errors, and sends a message using PHP logic.

I created the file:

public/module3a/ContactForm.php
The form includes fields for:

```
Name
Email
Subject
Message
```

I added detailed inline comments explaining the main parts of the script, including:

```
validateInput()
validateEmail()
displayForm()
$_POST form submission handling
sticky form behavior
mail() message handling
```

I also added a reflection section at the end of the PHP file explaining what each function does, how user input is protected, what parts were confusing, what could be improved, and why a copy of the form is sent to the sender.

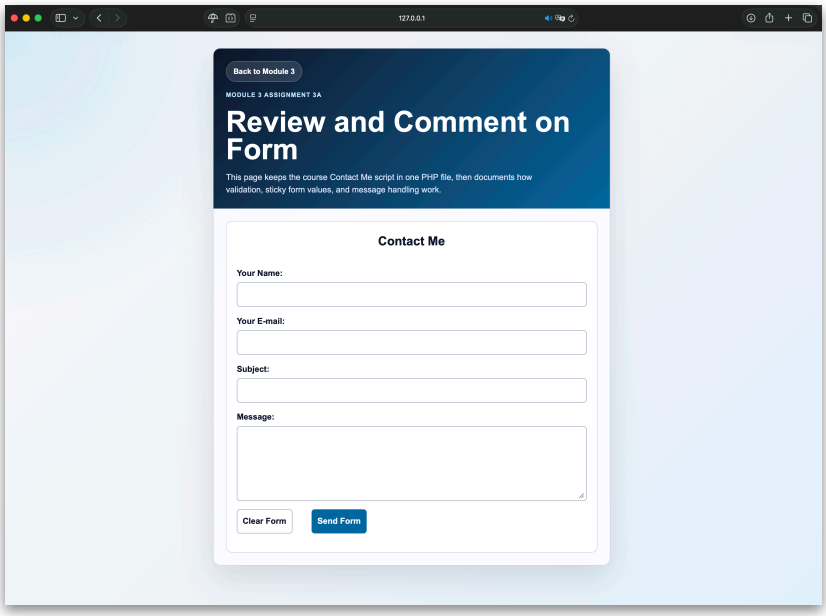

I tested the form locally and confirmed that invalid input shows validation messages while keeping the submitted values in the form. I also improved the form by safely displaying user input with `htmlspecialchars()` to reduce the risk of XSS when sticky values are shown again.

Local test URL:

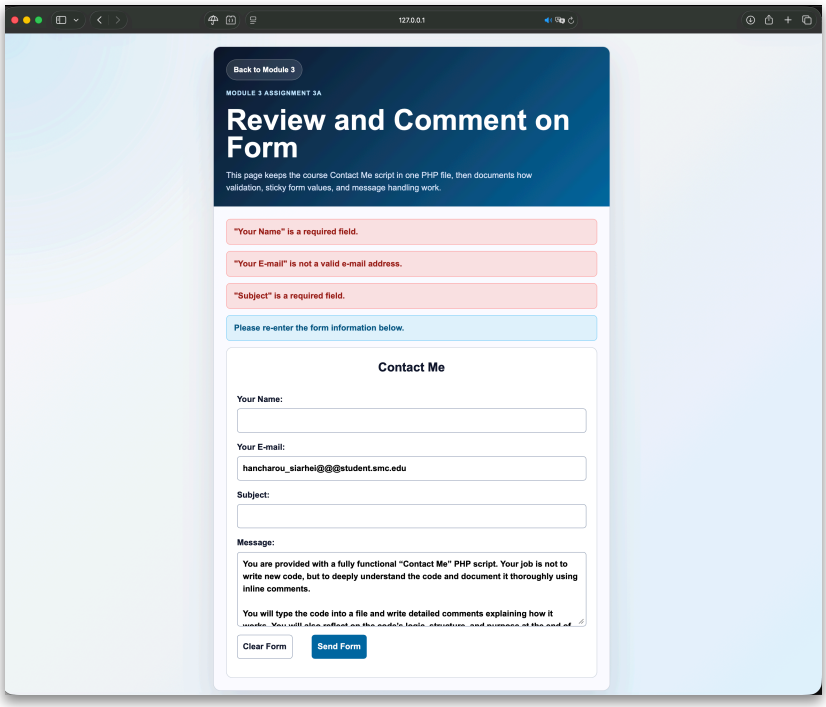

http://127.0.0.1:8000/module3a/ContactForm.php
GitHub Repository: https://github.com/sergehall/cs85-php-programming/blob/main/public/module3a/ContactForm.php

Screenshots included:

- Contact form page

- Invalid input validation and sticky form values after error

- Code/comments in ContactForm.php
