Module 3 Assignment 3B:
Secure Product Contact Form

Course: CS 85 - PHP Programming
Instructor: Vicky Seno

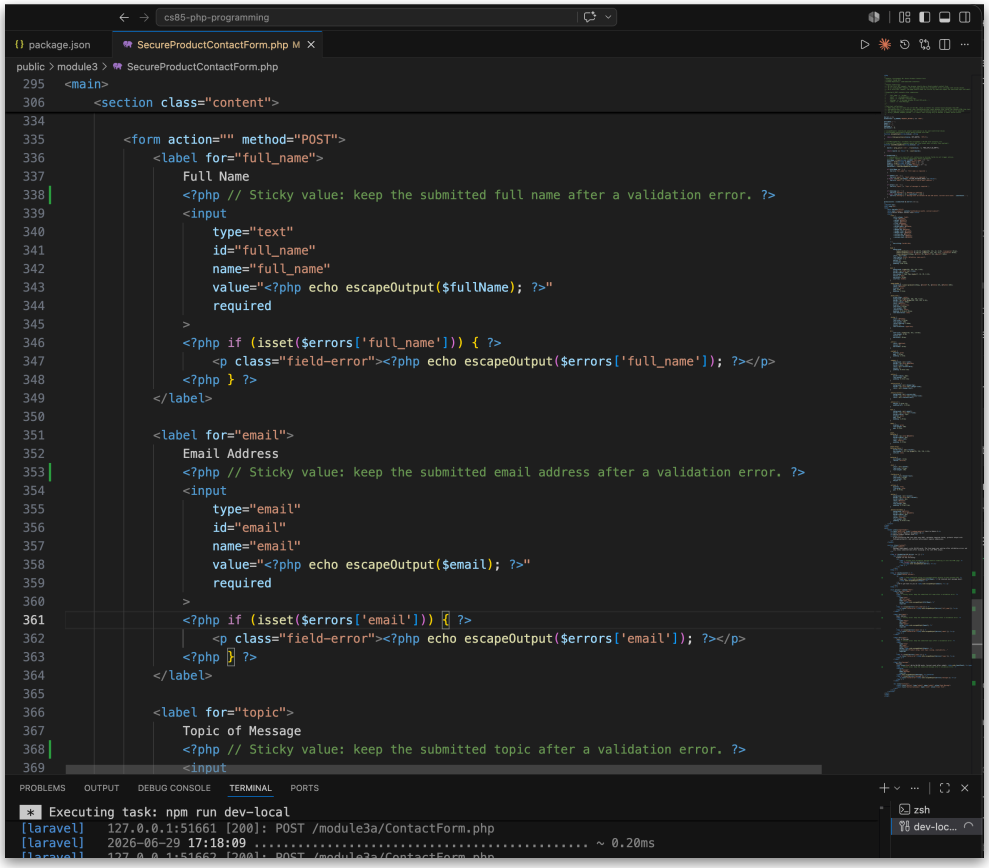

For this assignment, I updated the product contact form to make it more secure and user-friendly. I added server-side validation for the required fields, sanitized the submitted input, and escaped output before displaying values back on the page. This helps protect the form from unsafe input and common issues like XSS.

I also kept the form values “sticky” after validation errors, so users do not lose their entered information if they submit the form with a mistake.
