Module 4 Assignment 4A: Database Setup

Course: CS 85 - PHP Programming
Instructor: Vicky Seno

For this assignment, I set up and verified a local database development environment using Laravel Herd, Docker MySQL, and Adminer. PHP is running through Laravel Herd, and MySQL is running in Docker.

I confirmed that the database is accessible from the application using these connection settings:

Host: 127.0.0.1
Port: 3307
Username: cs85
Database: cs85_php_programming
Adminer URL: http://127.0.0.1:8081

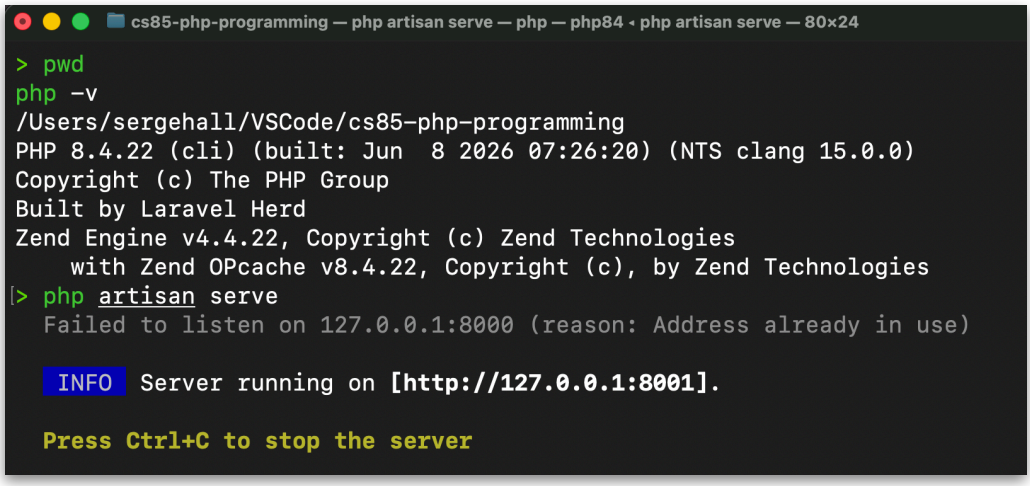

I successfully connected to MySQL from the assignment page. The setup report showed:

Connection check: Connected to MySQL successfully.
MySQL server version: 9.7.1
This confirms that PHP can communicate with the local MySQL server and that the database environment is ready for future SQL and database assignments.

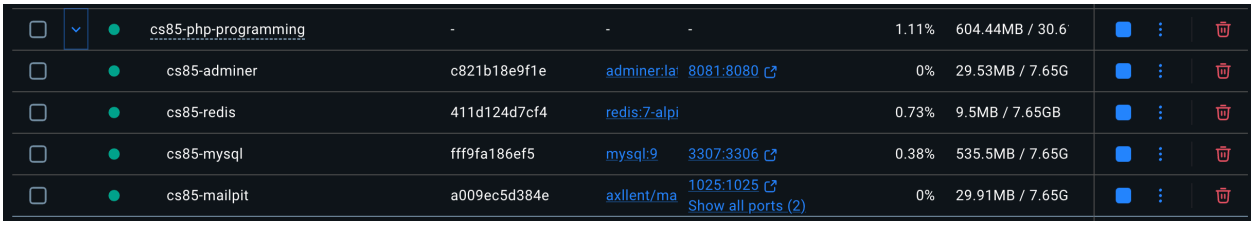

GitHub Repository: https://github.com/sergehall/cs85-php-programming/blob/main/public/module4/database-setup.php

Screenshots included:

- Laravel Herd running

- Docker/MySQL running

- Adminer open in browser and successful MySQL connection report
