Module 6 Assignment 6A:

MVC-Based PHP Application

Course: CS 85 - PHP Programming
Instructor: Vicky Seno

For this assignment, I created an MVC-based PHP application using Composer PSR-4 autoloading. The project is based on my real work as a photographer and my SERGIOARTG platform: https://sergioartg.com.

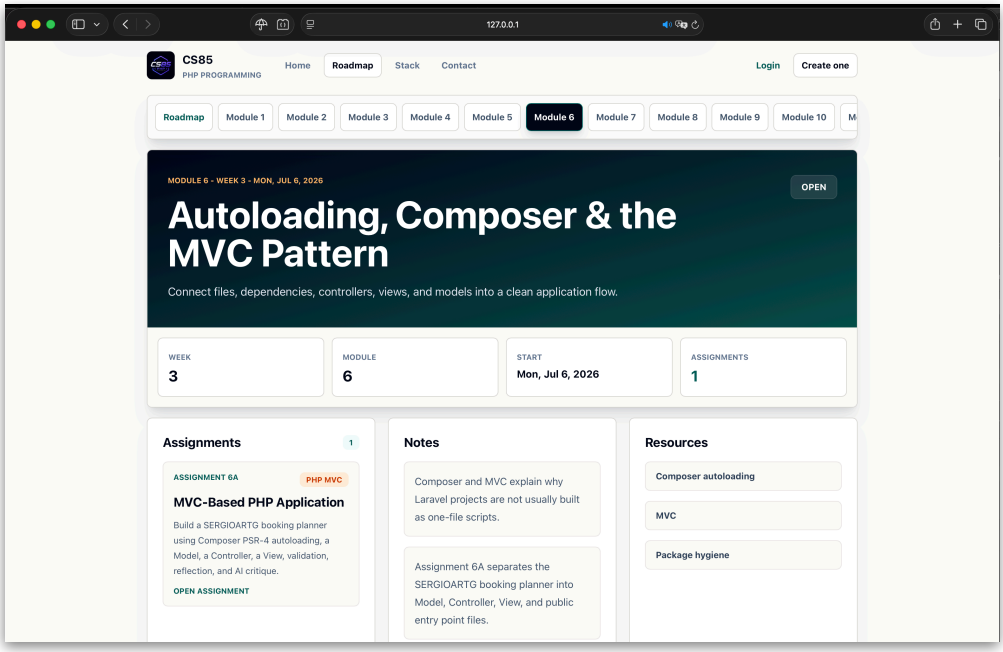

My application is a photography booking planner. It lets a user enter client and session details, then calculates the quote total, deposit due, project complexity, and booking workflow decision. The project uses a Model, View, and Controller structure. The PhotographyProject Model handles the business logic, the BookingPlannerController validates input and passes data to the

View, and booking-planner.php displays the interactive UI.
I also included AI-generated code for one method, the exact prompt I used, the raw AI output, and a critique discussing security, efficiency, correctness, style, and the changes I made.
