

Module 2

Assignment 2B: Time loops

Course: CS 85 - PHP Programming

Instructor: Vicky Seno

https://github.com/sergehall/cs85_projects/blob/main/app/Services/Modules/Module2B/CosmicCalendarBuilder.php

The screenshot shows a web application titled "Cosmic Day Number Calendar" within a browser window. The browser's address bar shows the URL `127.0.0.1`. The application has a header with "85 CS85 PHP Programming" and navigation links for "Home", "Module 2", and "Modules".

The main content area features a dark green header with the title "Cosmic Day Number Calendar" and a subtitle: "This Laravel page lists day numbers from my name length to today's day of year. Conditional logic highlights every number that matches the name, month, or both rules."

Below the header, there are four input fields:

- FIRST NAME: **Serge**
- NAME LENGTH: **5**
- DAY OF YEAR: **174**
Today counted as a day number in the current year.
- CURRENT MONTH: **6**
2026-06-23T22:15:40.8110108

A text box explains: "This is a day-number calendar, not a month grid. The loop starts at 5 because 'Serge' has 5 letters, then it counts up to day 174 of the year."

Below this, there are four filter buttons: "Divisible by name length" (selected), "Divisible by month", "Divisible by both", and "Regular day number".

The main display is a grid of day numbers from 5 to 139. The numbers are color-coded based on the filters:

- Divisible by name length (5): Purple background.
- Divisible by month (6): Yellow border.
- Divisible by both (30): Red background.
- Regular day number: Light blue background.
